Smart Study Task Manager

A Project in Application Development and Emerging Technologies

By Group 3:
Estipona, Jovince Gabriel B.
Falcon, Adrian A
Makatimbol, Rahjijm
Osorio, Jose
Rodrigo, Justine

October 2026

Members and assigned roles

No.	Project Role	Member Assigned
1	Team Leader / Project Manager	Adrian A. Falcon
2	UI / UX / Frontend Developer	Rahjim Makatimbol
3	Backend Developer	Jovince Gabriel B. Estipona
4	Database Developer	Jose Osorio
5	Quality Assurance / Documentation	Justine Rey Rodrigo

Problem Statement
Students often have multiple academic tasks from different subjects, making it difficult to keep track of deadlines, prioritize tasks, and manage their time effectively. Without an organized system, important tasks may be forgotten or completed late. This project aims to address these problems by providing students with a centralized application for managing and prioritizing their academic tasks.

Target Users
Students who want to track, organize, prioritize, and monitor their academic tasks for more efficient use of their time.

Proposed Solution
Develop a mobile application that allows students to organize their academic tasks by subject, set deadlines and reminders, monitor task completion, and receive recommendations on which tasks to prioritize. The application will provide a centralized and convenient way for students to manage their academic workload.

Major Features of the Project
1. Subject and task management
2. Task deadlines and notifications
3. Task categorization and prioritization
4. Task completion status tracking
5. AI-powered task prioritization and recommendations

Database to be Used
This project will primarily use **Firebase** as its database and backend service.

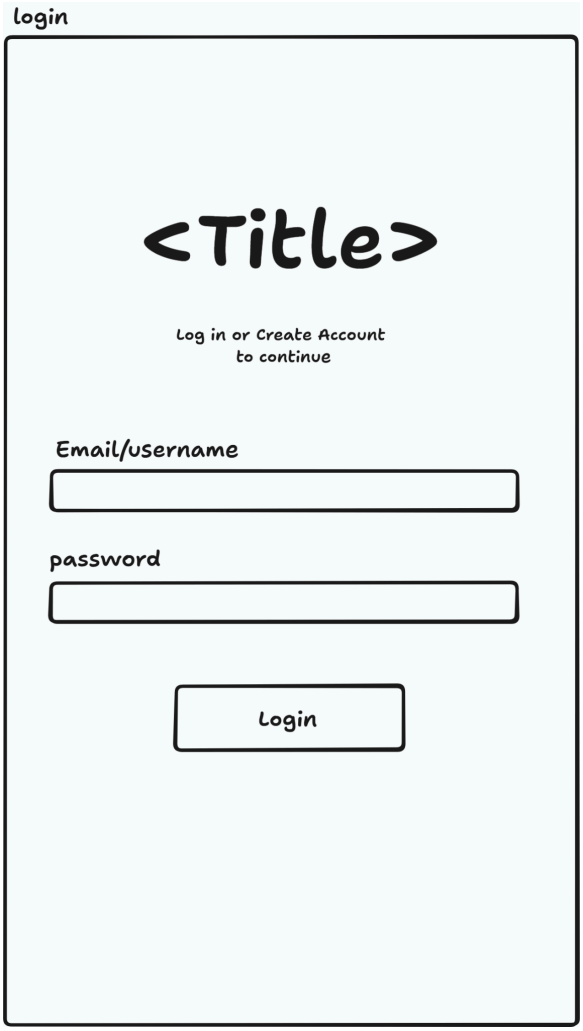

Featured Emerging Technology
This project will feature an AI-powered recommendation system for task prioritization and an AI chatbot to assist users with managing their academic tasks.

Technology Stack
Python, Flet, Flutter, Firebase

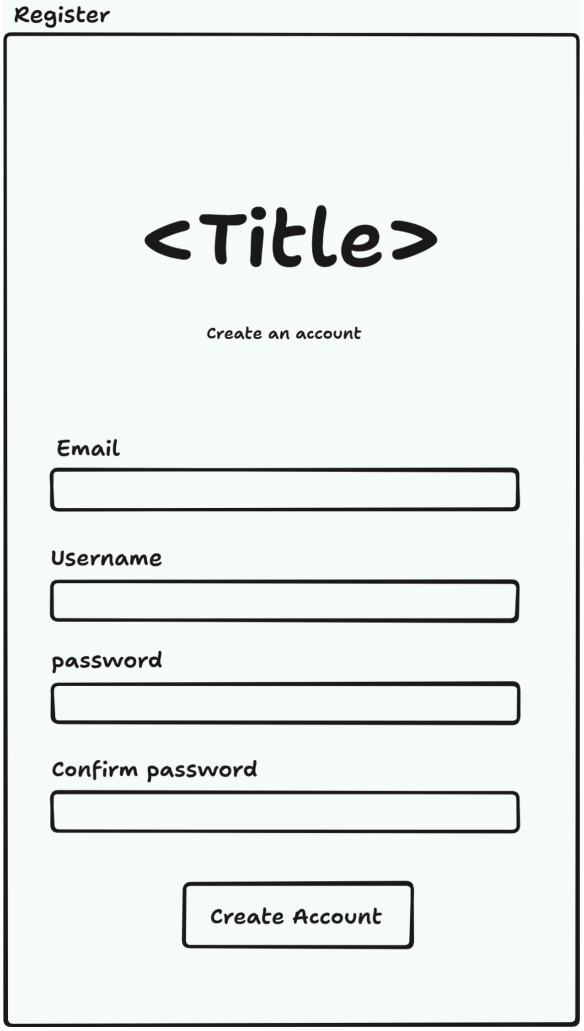

Expected Outcome of the Project
The project is expected to produce a functional and user-friendly mobile application that helps students organize their academic tasks, monitor deadlines, prioritize their workload, and track their progress. The system aims to help students manage their academic responsibilities more efficiently and reduce the likelihood of missed or forgotten tasks.
